

## CUSTOMER STORY

With €110 million in turnover in 2021 and sites in France, Luxembourg, and Poland, the PORTMANN Group, a transport and logistics specialist, has seen strong growth. Its subsidiary, PORTMANN LOGISTICS, is also expanding. To support customer growth and reach new markets, the group aimed to optimise warehouse information system management.

### TARGETS

- 01 Support customer growth and evolving needs.
- 02 Handle storage and transport of hazardous materials.
- 03 A tool adapted to the 3PL's needs

### WHY SAVOYE?

- Expertise in 3PL integration
- Easy customization of the solution
- A good coaching and a scalable solution

### RÉSULTATS

**A CONTROLLED  
HARMONIZATION OF OUR  
PROCESS**

**AN ENHANCED LOGISTICS  
OFFER**

**INCREASING OF  
PRODUCTIVITY**

**Sylvain DUTHIL**  
Site Manager

To support our growth and those of our customers, we thought it was essential to change our WMS in order to improve our performance and our services.

With turnover of 110 million euros in 2021, presence in France (4 sites), Luxembourg, and Poland, the PORTMANN Group is a transportation, chartering, logistics, and flow control (4PL) specialist boasting some impressive developments. A virtuous circle that also concerns its subsidiary PORTMANN LOGISTICS, a logistics services specialist. For the best possible response to the growth and development of its customers, whilst extending its know-how to other prospects, the transportation and logistics provider therefore wanted to optimise information system management in its warehouses.

The first site concerned was Brie-Comte-Robert (77), with surface area of 16,000 m<sup>2</sup>. This site houses the activities of PORTMANN LOGISTICS' main clients: Autodistribution, Bostik, and Motul. Three clients with different logistics processes and needs: faultless quality, traceability and reactivity for the first, reliability and customisation of processes for the second, and adaptation to daily volume changes for the third.

“ To support our growth and those of our customers, we thought it was essential to change our WMS in order to improve our performance and our services ”, explains Sylvain Duthil, Site Manager at Portmann Logistics. The service provider launched an invitation to tender in late 2017. After consulting several famous names in the sector, they finally chose the software solution of SAVOYE and its WMS LMXT, enriched with the LM Connect and the hazardous goods management modules.

The Brie-Comte-Robert site is subject to the Seveso III directive and therefore also required a tool capable of perfectly managing the storage and transportation of hazardous materials. SAVOYE was able to satisfy this requirement thanks to the hazardous goods management module dedicated to the management of regulatory constraints related to this type of process and product. In parallel, in order to improve the EDI flows of its client Autodistribution, the service provider also decided to acquire the LM Connect module. Enriched with both of its modules, the WMS solution is able to optimise nearly 400 order preparations.
