- Possibility of working hand in hand with an editor

RESULTS

IMPROVEMENT OF THE USER EXPERIENCE
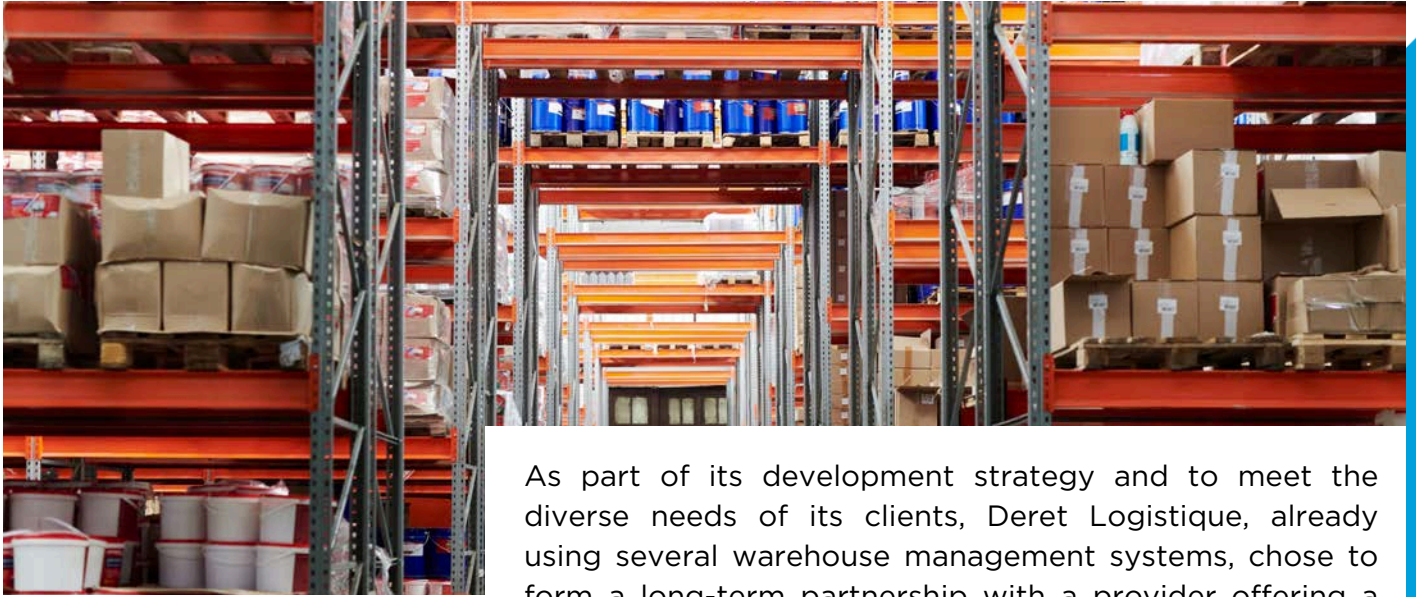

BETTER SUPERVISION OF MANAGEMENT

OPTIMIZED VISIBILITY

David PERRUCHE
Projects Manager at Deret

"We were won over by the technical aspect, the ergonomics and the modernity of ODATiO. Its ease of use and its cloud hosting were also weighty arguments."

DERET LOGISTIQUE IS STRENGTHENING ITS COLLABORATION WITH SAVOYE, ENTERING INTO A SUSTAINABLE PARTNERSHIP FOR ODATIO, A CLOUD NATIVE WMS, BOASTING A HIGH LEVEL OF FUNCTIONAL COVERAGE, AND WHICH IS EASY TO CONFIGURE

As part of its development strategy and to meet the diverse needs of its clients, Deret Logistique, already using several warehouse management systems, chose to form a long-term partnership with a provider offering a modern, ergonomic, and scalable WMS solution. After reviewing various options, the company selected SAVOYE for its ODATiO solution, attracted by its technical design, ease of use, cloud-based architecture, and the opportunity to collaborate closely from project design to system configuration.

The solution was deployed for a client in the fashion sector on the logistics site in Saran. It enhanced the user experience for operators, improved process supervision through advanced control features, and increased visibility over operational progress.

ODATiO also offers integrated data analysis capabilities, enabling the generation of performance indicators (KPIs) and detailed reporting. As both software publisher and integrator, SAVOYE simplifies integration with automated equipment such as robots and conveyors.

This partnership supports Deret Logistique's ambition to expand its business across multiple sectors, while continuing to rely on existing systems and leveraging an innovative solution.
