

CUSTOMER STORY

[#general merchandise](#)[#software](#)[#WMS](#)

Vega has embarked on a vast logistics modernization project, and has initiated the construction of a new dedicated site, due to be completed at the end of 2020. To pursue its mission and absorb the increase in operational volumes, Vega decided to launch a WMS project.

TARGETS

- 01 Absorbing the rise in operating volumes
- 02 Ensure traceability to batch number
- 03 Managing hazardous and flammable products

WHY SAVOYE?

- Product sizing consistent with customer requirements
- Ability to assist customers with specific developments
- High team availability

RESULTS

OPTIMIZING LOGISTICS PROCESSES

EASY TO MONITOR AND CONTROL

PERFORMANCE AND PRODUCTIVITY ANALYSIS

Stéphane BONNARDEL
VEGA Logistics Manager

“MAGISTOR stood out in 2 respects: sizing in line with our needs and SAVOYE’s ability to go beyond the standard. Our partnership worked thanks to everyone’s professionalism.”

To address the logistical challenges linked to its island-based location, the manufacturer Vega has launched an ambitious modernization project with the construction of a new dedicated site.

As part of this initiative, and to support increased volumes, the company decided to implement a WMS project. Vega must also meet two specific operational constraints: ensuring strict batch-level traceability and managing hazardous and flammable products.

Following a technical analysis and a site visit, Vega selected SAVOYE, a specialist in logistics execution solutions, as its partner. The company adopted the latest version of the MAGISTOR WMS, along with the LM Connect solution. A thorough functional analysis laid the foundation for a well-controlled deployment. Close collaboration between the teams helped define the target processes, structure the logistics flows, and configure a tool tailored to the site's specific requirements.

With the introduction of radio frequency and the elimination of paper-based processes, the new WMS provides greater visibility over operations. It facilitates the tracking of regulated products, enhances performance analysis and productivity management, and addresses quality-related issues. Vega now aims to strengthen delivery oversight, share key indicators internally, and continue optimizing its logistics processes through this warehouse management solution.

VEGA, A CALEDONIAN SPECIALIST IN HYGIENE PRODUCTS, HAS ESTABLISHED ITSELF AS A MAJOR INDUSTRIAL PLAYER IN NEW CALEDONIA. TO PURSUE ITS MISSION AND ABSORB THE GROWING VOLUME OF ITS OPERATIONS, VEGA HAS IMPLEMENTED THE MAGISTOR WMS.
