- Supplier of a complete logistic offer to suit the customer's needs
- Ability to assist MDS' constant growth

RESULTS

**STORAGE AREA
OPTIMIZATION**

**ORDER PREPARATION
TIME SAVING**

**ORDER PREPARATION
QUALITY**

Bruno DELRUE
CEO MDS

"SAVOYE was able to respond to our request and present us with a complete offer in terms of conveyors, packaging machines, dynamic storage equipment and WMS software."

MDS manages a high-volume logistics operation, handling 55,000 SKUs, around 5,000 daily orders, and shipping 50 million items annually.

MDS IS ONE OF THE FIRST
USERS OF SAVOYE'S
GOODS-TO-PERSON X-
PTS SOLUTION.

The company operates from three logistics sites located in Belgium, Switzerland, and the Paris region, the latter being the largest. On this main site, 180 employees work daily, supported by seasonal reinforcements during peak periods.

To support the expansion of its operations, MDS has implemented automation at its main warehouse, integrating conveyors, packaging machines, a classic station-based picking system, and a warehouse management system (WMS) developed by SAVOYE. As an early adopter of the goods-to-person X-PTS technology, the company has progressively installed several systems composed of operator stations, aisles, shuttles, and elevators to increase its capacity and optimize flows.

This automated setup addresses growing demands for speed and accuracy in order preparation, as product ranges expand and order sizes decrease. Automation significantly reduces operator travel, increases storage density, and improves order accuracy.

Engaged in a long-term partnership with SAVOYE, MDS continues to develop its logistics infrastructure, relying on its partner's technical expertise and adaptability.
